Homework 3: OOP Labs

CS 150 with Dr. Sam Schwartz

Upload to Canvas when done.

1 Purpose

In this assignment you will gain experience with key object oriented principles which build on each other.

2 Tasks

Labs

Each day of class will introduce a lab based on the lecture material. The specific requirements will be outlined in the slide deck. Your responsibility for this week is to complete these three labs.

Submit to Canvas

Upload the following files to Canvas:

- `code.zip` which contains all of your code
- Multiple `screenshot.png` files, or a similar filenames, that demonstrates that the code you wrote in your labs are working as specified via a screenshot of your IDE/console. This should primarily include your terminal output.

3 Grading Criteria

In general I am looking for the elements of validity, readability, and fluency in all code-based assignments. (See more below.)

I tend to dock 5ish points off for each error (although smaller or larger quantities like -1pt or -10pts exist based on the magnitude of the error), and will provide free-form feedback detailing why any points were missed in the comments on Canvas.

Please note that I do not get notifications about replies to my comments on Canvas, so if you have any questions please reach out to me directly.

Validity

Student submitted files which implemented the tasks correctly and handled possible errors gracefully.

Moreover, the student submitted screenshot(s) displaying the code's output.

Readability

The deliverable used professional English and typesetting throughout, and had all methods annotated with JavaDoc.

Fluency

The deliverable was executed in such a way that an experienced practitioner would not find the deliverable "weird-in-a-bad-way" or unduly jarring.
